

For this project I made up a fictional non-profit company called Save A Ninja. Their mission is to shed light on the plight of the Ninja.

The theme is a simple dual tone black and red, colors commonly associated with martial arts and ninja lore. The lines are crisp and clean in keeping with the flat design concept that is popular at the moment. I chose a single page, scrolling site because of the limited content to display, it also helps tell the story and convey the information in one piece instead of making a user jump around and lose some of the impact. This layout lets a user experience the art, see the videos of training, and experience where the ninja lives in sequence maximizing the impact of the information being viewed.

## Elements

1. **Canvas** – There are 2 canvas elements on this site. The first is in the header section on the right side of the body. The ninja crouching down appears on page load and is set to disappear after about 10 seconds. The second canvas is about midway down the page and stretches the entire width of the body. Approx 5 sec. after page load a throwing star appears to rotate and move across the screen forming a page break.
2. **Image Gallery** – The image gallery is the large black square near the top right of the page. Click on an image to display a lightbox with larger image.
3. **HTML5 Video** – Two HTML5 videos are displayed by clicking the fighting techniques link.
4. **Interactive Map** – Located at the bottom of the page under the Territory heading.
