

For this assignment I selected a jQuery plugin called ScrollUp. ScrollUp is an easy way to add a beautiful back to top button to any web page. I created a simple demonstration page with several paragraphs of text to allow for vertical scrolling. Using the plugin I added a back to top link which displays in the bottom right of a browser window once the user scrolls down the page. When the link is clicked the page auto scrolls back to the top of the web page.

I liked this plug in for a few reason, most importantly was its ease of use and documentation. I found a lot of how-to articles and videos but the solutions were old, overly complicated or had bugs in some browsers and didn't have much styling. The lightweight file sizes was another aspect that I found very beneficial, especially in large builds, adding bulky and large plugins will severely hurt page load times.

You can view the video of my presentation and a brief demo of the plugin working in a web page by clicking this link: <https://www.youtube.com/watch?v=llrVEPFXMjQ>
