SCROLLUP JQUERY PLUGIN

WIA PRESENTATION ASSIGNMENT

By: Michael Saner

THE SCENARIO

You just built a client one of those super snazy inifite scolling websites that are all the rage right now.

THE PROBLEM

Your client just called and their users are complaining about having to scroll all the way back up the page to find the navigation bar and other key elements. You've got 1 day to deliver a fix!

YOUR OPTIONS

Your knee-jerk reaction might be to panic and begin to frantically start building something from scratch. DO NOT do this! I promise you, there are better ways. Find out how...

Hint: press the down arrow on your keyboard.

1. DO A WEB SEARCH

Do some searches for "back to top" buttons. You'll find plenty of people that have come before you. You should be able to follow their examples and come up with a solution a little faster than doing it from scratch.

The downside is that there probably isn't any documentation on Mr. X's super cool blog of coding awesomeness.

HINT: Use the UP and DOWN arrow keys to browse more options.

2. USE A PLUGIN

JS and jQuery plugins abound. Luckily for you there's an amazing plugin specifically for back to top links. It's called scrollUp and it comes with great documentation, example files, customizable styles and a simple implementation that works on all sites. Hit that right arrow key to learn more.

ABOUT SCROLLUP

- Developed by Mark Goodyear - markgoodyear.com
- Lightweight jQuery plugin that works on all websites.
- Fully customizable and comes with multiple theme style sheets.

INSTALLING SCROLLUP

Download it from Mark Goodyears website here.

The webpage will have all the information you need to get you started. Including a demo, link to the GIT repo and explanations of the plug ins various features.
